

A clear route *starts with a clear note.*

SnapHOU is a small, honest workspace for making Foster Place sidewalk barriers readable before a neighborhood decides what comes next.

CHALLENGE PREMISE

AGING IN PLACE

PEDESTRIAN MOBILITY

Original brief: [Improve Houston Sidewalks to Enable Aging in Place](#)

FOSTER PLACE

One clear route
starts with one
clear note.

A route problem is also an *access* problem.

Challenge 12 asks for a small neighborhood system that can document and quantify conditions keeping residents from sidewalks – and use those findings to support better local routes.

! What we are not claiming: SnapHOU has not measured these conditions, verified the challenge narrative, or reported an outcome.

01

Uneven streets

Residents and students may be pushed off the sidewalk and onto a harder route.

CHALLENGE PREMISE

02

Blocked edges

Overgrown vegetation and obstructions can narrow a clear walking path.

CHALLENGE PREMISE

03

Aging in place

The brief centers residents whose properties need external support.

CHALLENGE PREMISE

04

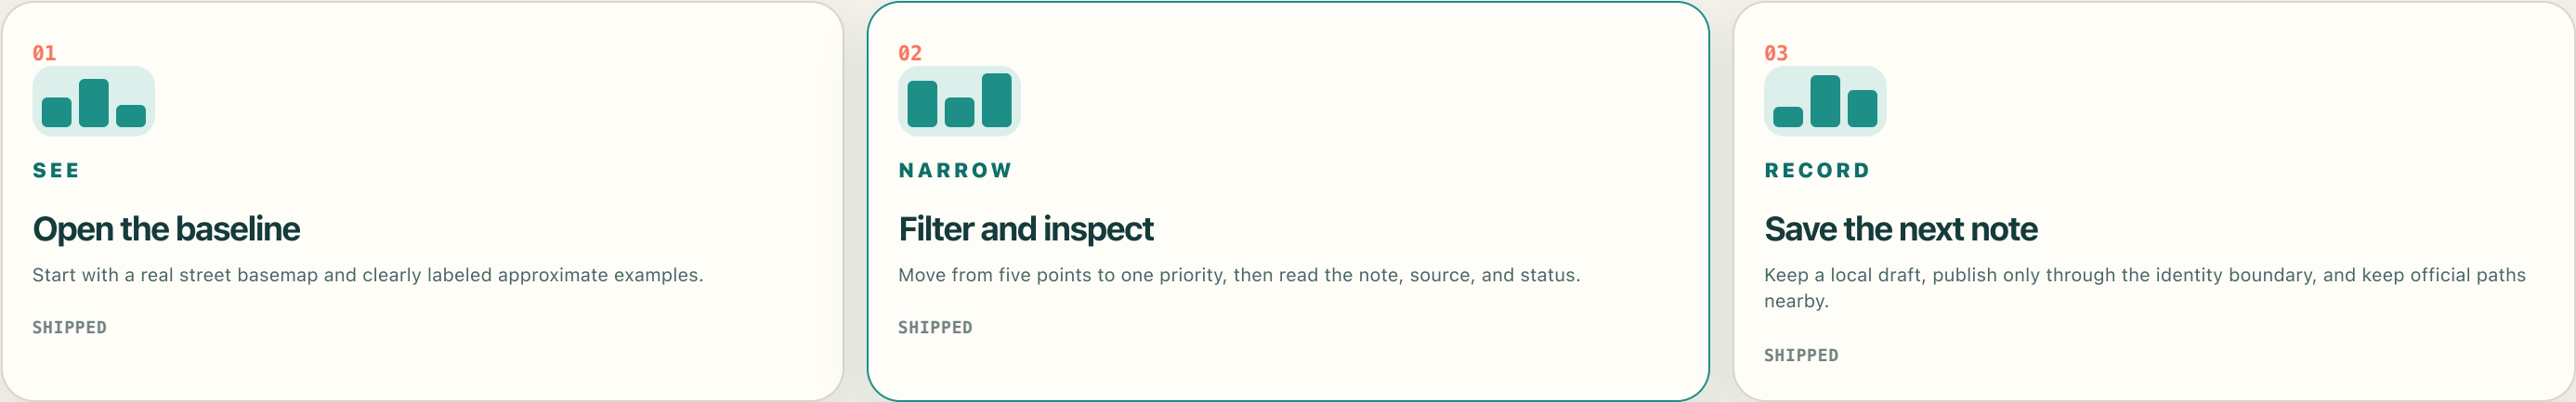

School access

Foster Elementary and Cullen Middle School appear in the brief's route context.

CHALLENGE PREMISE

Make a neighborhood picture people can *read*.

The first release turns one broad challenge into a bounded, repeatable field-note flow.

PROGRESS

A usable map + list, with a clear line between an example and a community observation.

NO 311 WRITE-BACK

One screen. Five *honest* points.

The board makes the current picture legible without inflating what the prototype knows.

5

public examples

≈

block-level points

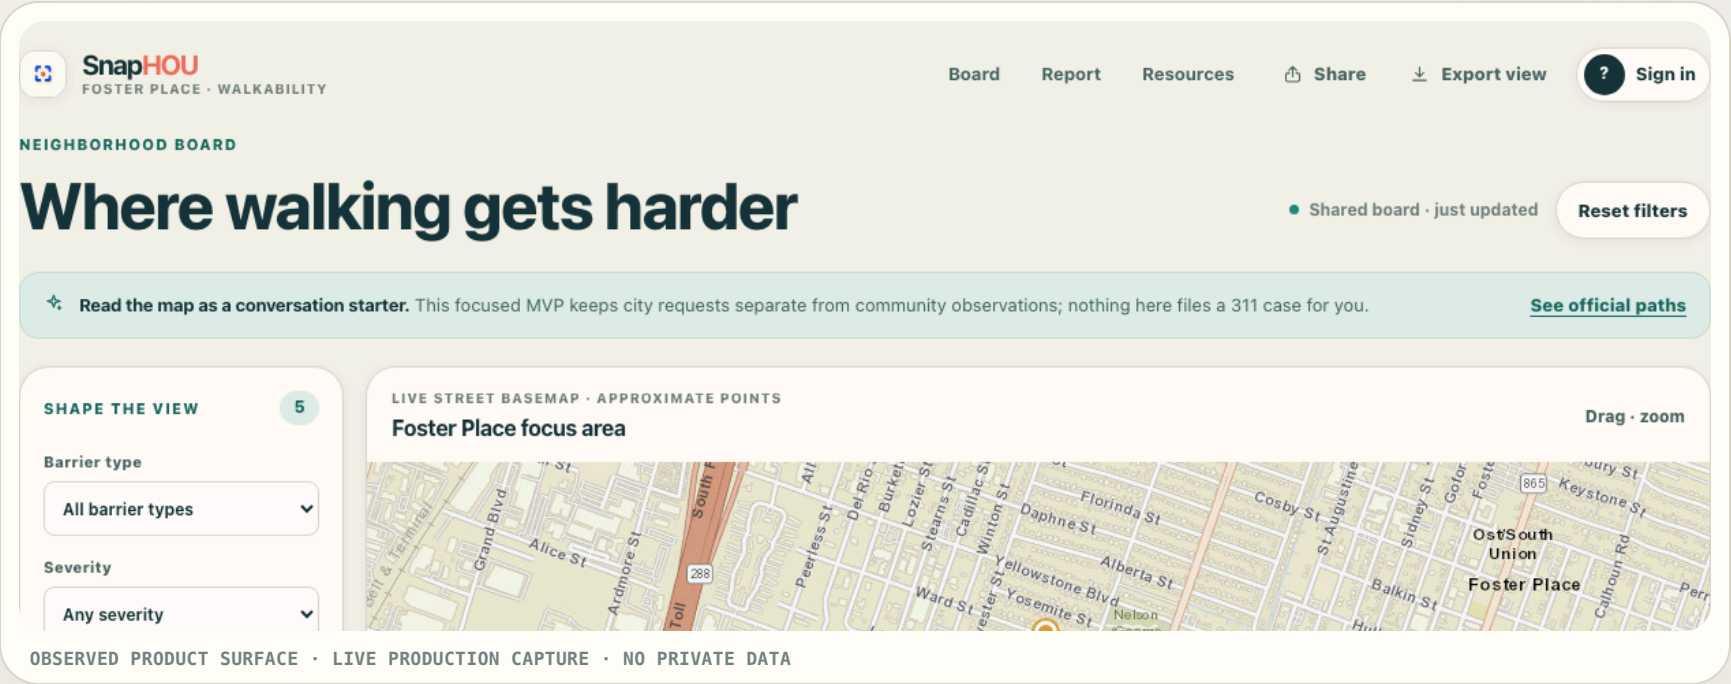

0

resident submissions claimed

Demonstrative example · approximate block point.
Not a field survey or City record.

[Open the live board ↗](#)

Narrow the view. Leave a *block-level* note.

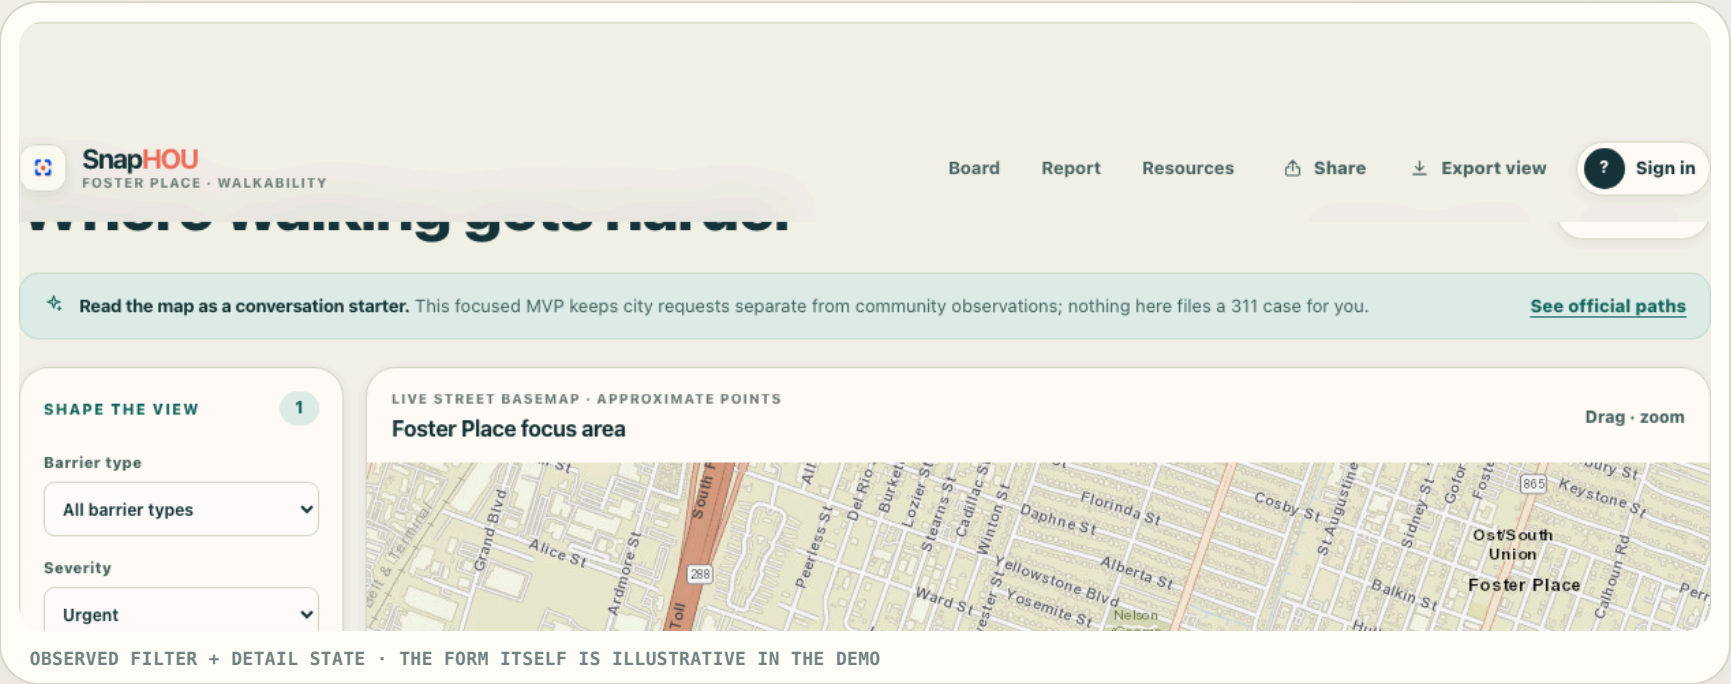

A user can filter to an urgent example, inspect its context, and start a field note without exposing a home number.

01	Filter	category · severity · status
02	Inspect	timestamp · source · precision
03	Publish carefully	local draft first · Google-gated share

LOCAL DRAFT

GOOGLE-GATED PUBLISH

NO 311 CASE

Three levels of *honesty*.

A useful prototype earns the right to ask for validation; it does not skip it.

01

PROGRESS

Make the board usable.

Map, list, filters, details, export, official resources, local draft, and a clear demo boundary are shipped.

VERIFIED IN PRODUCT

02

PRACTICAL

Repeat the field note.

Use a bounded point and a short note to create a consistent starting record that a neighborhood can review.

WORKFLOW HYPOTHESIS

03

POTENTIAL

Build a verified route plan.

Residents and local partners could validate conditions, prioritize a route, and coordinate next steps.

NEEDS PEOPLE + EVIDENCE

Start with one *verified route.*

Use the prototype to review one block-level note with the people who know the route. Then decide what should be measured, who should coordinate it, and what the neighborhood wants next.

Open SnapHOU ↗

Watch the 60-second demo ↗

SnapHOU is a prototype for Challenge 12. It has no verified impact result, City endorsement, or 311 write-back.

FEEDBACK INVITE

C-10

What should we validate first?

1. Is the Foster Place focus boundary right?
2. Which route condition deserves the first field check?
3. Who should own the next coordination step?
